

Hi there Earthlings,
 It's Q Pootle 5 here. I have been reflecting on my visit to the wonderful planet that is Earth. I was so grateful to the creature that helped me fix my rocket booster so I didn't miss Z party over by the way! It was the best animal I've ever met! I got no thinking wonder if you would help me with some of my investigations? I chose you specifically because a little birdie told me that you are the cleverest children on the entire Earth! My first investigation has a focus on materials. I found some new materials on planet Earth and I have no idea what these materials can do! What can I use them for? How can I change them? I have sent through some materials and information for your teacher to show you. Please ask your findings in your science book and I will see the little birds in your classroom to give in and take notes from your books when you are not around.
 I hope you enjoy helping me with my first investigation!
 Best Wishes,
 Q Pootle 5

SCIENCE 9th September 2019
Q POOTLE 5 sent us a letter challenging us to investigate the various properties of materials and whether or not they could be stretched twisted cut squashed or bent. We recorded the results in a table.
